PEI Release Notes 2024

Version number and date	Description
Version **1.8.27** 21.03.2024	Technical Update
	Bug fix: The list of finalized plasma pools sometimes still showed the "application in progress" status, even though all plasmapools were finalized.
	Bug fix: Applications containing the character "/" could not be chosen for packaging and filling batches.
	Bug fix: Editing an application for additional information for a plasmapool application was not possible for pUApply.
Version **1.8.26** 29.02.2024	Bug fix: Delivery note expanded to include English text; delivery note displayed on one page
	Bug fix: Selection of reference batches triggered an error. Sometimes there are two batches with the same batch name but for two different products. In this case, an error occurred when you tried to select one as a packing and filling batch.
	Bug fix: Presentation of plasma pool certificates was fixed. You can see now that plasma pool certificates can have a status that is different from the list status.
	Technical Update
Version **1.8.22** 09.11.2023	Bug fix: "Empty" can also now be selected in the list of OMCLs.
	Bug fix: The list displayed in "Plasmapools overview" has been adjusted.
	New: A plausibility check is carried out when entering solvent data.
	Bug fix: The check for the total number of all containers included in an application has been adjusted for subsequent applications.
	User interface: Change of the label "Number of duplicates" to "Certified duplicates".
	New: English text has been added to the delivery note.

	New: Addition of a security query when withdrawing applications
	Bug fix: Labeling errors in the English version have been corrected.
	New: The "Batch overview" menu has been released. Excel export of the applicant's own batches with release date is possible.
	User interface: Renaming of the field "Total of all containers released" to "Number of all containers included in application".
	Bug fix: The "Withdraw request" button is no longer displayed for saved applications.
	Bug fix: Batches with the same name and different products are now displayed as related batches for packing and filling batches.
Version **1.8.20** 28.09.2023	Technical update
Version **1.8.19** 31.08.2023	The "send" button will be deactivated after first use. We want to prevent double sending.
Version **1.8.18** 06.07.2023	Technical update: Update of the authentification software.
	User Interface: We inserted two new columns (Authorisation number and Name of medicinal product) on the page "batch selection". This page is shown when you select a regular batch as basis for a packaging or filling batch.
	Bug fix: The barcode embedded on the delivery note for samples was corrected.
	Bug fix: The number of containers is correctly shown when you select an A+ application based on a Q+ application.
