User self-administration

All persons with access authorisation are responsible for protecting their user codes and X.509 certificates in their area of accountability. They are obliged to further personally secure these user codes by means of a confidential, self-defined password that can be changed by the authorised user at all times.

By registering, persons with access authorisation accept that the DIMDI collects and stores personal data for these persons in electronic form, and uses such data in electronic form for all tasks resulting from this registration for further processing. This data may be forwarded to third parties (e.g. The Federal Institute for Drugs and Medical Devices (BfArM) and The Paul Ehrlich Institute (PEI)) within the scope of fulfilment of contractual obligations.

User codes and data of persons with access authorisation are handled confidentially by the DIMDI. The additional personal password set up in each case is stored in an encrypted form and is not known to the DIMDI.

All persons with access authorisation are liable for damages that result from a breach of these usage conditions.
